Menlo Systems announces new partnership with Hamamatsu

Hamamatsu Deutschland has purchased a minority stake in Menlo Systems GmbH, while Alex Cable has increased his ownership in the company.

Menlo Systems is a developer for optical frequency combs, ultra-stable lasers, femtosecond lasers and terahertz solutions. Dr. Reinhold Guth managing director of Hamamatsu Deutschland said "we are excited about this creating an opportunity to collaborate with Menlo Systems to develop measuring and spectroscopic systems that can be utilized by our OEM customers". Dr. Michael Mei CEO of Menlo Systems emphasized that "the worldwide reach of Hamamatsu will allow us to bring our Nobel prize inspired technology to a much wider customer base. It is now possible for us to develop optical engines that can serve both our end users and manufacturers of complex systems". Alex Cable said that "the addition of Hamamatsu to the Menlo Systems family substantiates his belief that Menlo has the best technology and the right products to serve several growing markets." Menlo and Hamamatsu believe that this purchase of a minority share will lead to new applications and markets for both companies, since there is almost no overlap in their product lines.

About Menlo Systems:

Precision in Photonics. Together we shape light.

Menlo Systems GmbH is a leading developer and global supplier of instrumentation for high-precision metrology. The company with headquarters in Martinsried near Munich is known for its Nobel Prize winning optical frequency comb technology. With subsidiaries in the US and China and a global distributor network, Menlo Systems is closely connected to its customers from science and industry. The main product lines are optical frequency combs, time and frequency distribution, terahertz systems, ultrafast and ultrastable lasers, and corresponding control electronics. Besides standard production, Menlo Systems develops and manufactures custom made solutions for laser-based precision measurements.

About Hamamatsu:

Hamamatsu Photonics is a worldwide leading manufacturer of optoelectronic components and systems. Among others we offer sensors and systems for spectroscopy (including ultra fast), scientific-grade cameras, beam monitoring solutions, photon counting detectors and systems, photomultipliers, photodiodes, IR detectors.
